

# COMP 302 Winter 2020 Final Review

Prakash Panangaden

School of Computer Science  
McGill University

McGill University, Montréal, January 2020

# Goodbye to COMP 302

- It is very sad to be ending the class in this way.

# Goodbye to COMP 302

- It is very sad to be ending the class in this way.
- But there are much worse things happening these days.

# Goodbye to COMP 302

- It is very sad to be ending the class in this way.
- But there are much worse things happening these days.
- Today I will give a capsule summary of the course.

# Goodbye to COMP 302

- It is very sad to be ending the class in this way.
- But there are much worse things happening these days.
- Today I will give a capsule summary of the course.
- Then I will describe the final exam.

# Remember the course administration details

- 1 [cs.mcgill.ca/~prakash/Courses/302/comp302.html](http://cs.mcgill.ca/~prakash/Courses/302/comp302.html)  
Lecture notes, assignments and solutions will be posted there.

# Remember the course administration details

- 1 [cs.mcgill.ca/~prakash/Courses/302/comp302.html](http://cs.mcgill.ca/~prakash/Courses/302/comp302.html)  
Lecture notes, assignments and solutions will be posted there.
- 2 I said that I would **never** use slides again.

# Remember the course administration details

- 1 Classify values
- 2 and expressions
- 3 and functions and procedures
- 4 in order to *restrict* what can be expressed.
- 5 Give up expressive power for
- 6 guarantees of good behaviour.

# What to understand

- 1 Names: binding and scoping

# What to understand

- 1 Names: binding and scoping
- 2 Evaluation rules: expressions  $\rightarrow$  values

# What to understand

- 1 Names: binding and scoping
- 2 Evaluation rules: expressions  $\rightarrow$  values
- 3 Typing rules,

# What to understand

- 1 Names: binding and scoping
- 2 Evaluation rules: expressions  $\rightarrow$  values
- 3 Typing rules,
- 4 which may not be exclusive.

# Where do we go from here?

- 1 Intimate connection between logic and computation: the Curry-Howard isomorphism

# Where do we go from here?

- 1 Intimate connection between logic and computation: the Curry-Howard isomorphism
- 2 New directions in type theory: guaranteeing security

# Where do we go from here?

- 1 Intimate connection between logic and computation: the Curry-Howard isomorphism
- 2 New directions in type theory: guaranteeing security
- 3 New logics and new programming paradigms: linear logic

# Where do we go from here?

- 1 Intimate connection between logic and computation: the Curry-Howard isomorphism
- 2 New directions in type theory: guaranteeing security
- 3 New logics and new programming paradigms: linear logic
- 4 Probabilistic programming languages designed for machine learning

# Overview of OCaml

- 1 Functional - functions are the main entities.
- 2 Higher-order - functions may take other functions as arguments and
- 3 may even return functions as results.
- 4 Typed - every entity has a type.
- 5 Types are described in their own little language; types are not just the basic types
- 6 but are polymorphic and one can have new user-defined types.

# Structure of the exam

- There are 6 questions in total.

# Structure of the exam

- There are 6 questions in total.
- 2 questions on recursion on lists.

# Structure of the exam

- There are 6 questions in total.
- 2 questions on recursion on lists.
- One is straightforward and one is not.

# Structure of the exam

- There are 6 questions in total.
- 2 questions on recursion on lists.
- One is straightforward and one is not.
- One question on higher-order functions.

# Structure of the exam

- There are 6 questions in total.
- 2 questions on recursion on lists.
- One is straightforward and one is not.
- One question on higher-order functions.
- One question on higher-order functions with refs.

# Structure of the exam

- There are 6 questions in total.
- 2 questions on recursion on lists.
- One is straightforward and one is not.
- One question on higher-order functions.
- One question on higher-order functions with refs.
- One question where you have to give an **informal** derivation of the polymorphic type of a function.

# Structure of the exam

- There are 6 questions in total.
- 2 questions on recursion on lists.
- One is straightforward and one is not.
- One question on higher-order functions.
- One question on higher-order functions with refs.
- One question where you have to give an **informal** derivation of the polymorphic type of a function.
- One collection of true/false questions. No explanations are needed.

What isn't here isn't on the exam.

# How to submit

- At 6:30pm on the 22nd of April the exam will be posted on the course web page. There will be links in Piazza and on myCourses to this exam.

# How to submit

- At 6:30pm on the 22nd of April the exam will be posted on the course web page. There will be links in Piazza and on myCourses to this exam.
- The exam is a pdf file. Make sure you have a pdf viewer.

# How to submit

- At 6:30pm on the 22nd of April the exam will be posted on the course web page. There will be links in Piazza and on myCourses to this exam.
- The exam is a pdf file. Make sure you have a pdf viewer.
- The solutions must be written in **plain text** in **one single file**.

# How to submit

- At 6:30pm on the 22nd of April the exam will be posted on the course web page. There will be links in Piazza and on myCourses to this exam.
- The exam is a pdf file. Make sure you have a pdf viewer.
- The solutions must be written in **plain text** in **one single file**.
- I **DO NOT WANT** pdf, latex, Word, handwritten scans or anything else. I don't want each question in a new file.
